# Abstract

In the abstract, you must (1) present the problem of the thesis/dissertation, (2) discuss the materials and methods used, and (3) state the conclusions reached. Individual chapters should not have abstracts.

Note that this will be the first numbered page: it is page *iv*; pages *i*, *ii* and *iii* (copyright, signature page and abstract signature page) were counted but not numbered. If you look ahead, you will see that numbering up to the first page of text is in roman numerals. On the first page of Introduction or Chapter One, begin numbering at Arabic number 1. This numbering (1, 2, 3, 4 ...) is consecutive through the rest of the document.

Also note that the page margins are set with a 1.5-inch margin on the left side and a 1-inch margin on the top, right side, and bottom, throughout the entire document.

The page number below should be above the 1-inch margin and centered to the page margins, not the page edges.

# Dedication

If you want to dedicate your thesis to anyone do so here.

# Basic Document Class Features, Using a Very Long Chapter Title to Illustrate Appropriate Behaviors

[1] This chapter is an example of how to format normal material in the dissertation style. Most of this information is standard to  $\text{\LaTeX}$ .

### 3.1 Intra-chapter divisions: Sections

Section headlines are `\Large` and in italics. Compare them to subsections below.

#### 3.1.1 Subsections: More numbers!

Isn't it funny that upright letters are called "roman" while slanted letters are "italic". That's like Italian, and Romans are Italians too. What gives?

##### 3.1.1.1 Subsubsections: Smaller and smaller

Subsubsections are allowed, but are not numbered and don't appear in the table of contents. Likewise, you can use the next level of sectioning.

**3.1.1.1.1 Paragraphs** These divisions are unnumbered and do not appear in the Table of Contents. Why would you use this at all?

**Subparagraphs** This is the finest division possible. It's also unnumbered and omitted from the Table of Contents. If you find yourself subdividing sections this finely, you have probably made some poor organizational choices.

### 3.2 Let's do some math

Let's look at an equation:

$$\partial f t = f(t) \quad \text{subject to} \quad f(0) = c. \quad (3.1)$$

We've used the `\newcommand` defined in the preamble of `dissertation.tex` to produce the derivative. You can get a second derivative like  $\partial^2 f t^2$  by adding some sneaky superscripts. Fancy.

More advanced equation formatting is available in the AMS environments. See the guide `amsmath user's guide`. Here are some nice examples of cases people usually have trouble with.

An equation that's too long for one line — use `multline`:

$$\begin{aligned} a + b + c + d + e + f + g + h + i + j + k + l + m + n + o \\ = p + q + r + s + t + u + v + w + x + y + z. \end{aligned} \quad (3.2)$$

An equation with multiple parts and one number per line — use `align`:

$$a_1 = b_1 + c_1 \quad (3.3)$$

$$a_2 = b_2 + c_2. \quad (3.4)$$

The same equation, set inside the `subequations` environment:

$$a_1 = b_1 + c_1 \quad (3.5a)$$

$$a_2 = b_2 + c_2. \quad (3.5b)$$

Notice that by clever placement of labels, I can reference the pair via (3.5), the first (3.5a), or the second (3.5b). One number for multiple equations can be accomplished using the `split` environment:

$$\begin{aligned} a &= b + c - d \\ &\quad + e - f \\ &= g + h \\ &= i. \end{aligned} \tag{3.6}$$

People often struggle under the complicated and ugly ‘`eqnarray`’ environment. Don’t do it! The AMS ones are easy. Other stumbling blocks are cases:

$$a = \begin{cases} b & \text{for } x > 0 \\ c & \text{otherwise,} \end{cases} \tag{3.7}$$

matrices:

$$A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix} = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix}, \tag{3.8}$$

and evaluation bars:

$$a = \left. \frac{\partial u}{\partial x} \right|_{x=0}. \tag{3.9}$$

See the source file for details.

When we reference an equation with something like `\eqref (3.1)`. If you click on the above references in the PDF, your viewer should scroll up to the above equation. It’s handy. Labels and references may be attached to all sorts of objects. There is a `\label` attached to this chapter (it appears at the top

of this file), and we may reference it by ( `Chapter~\ref{chap:example}` ), producing “Chapter 3”. By default these ref’s are hyperlinked as well. Later, we’ll see labeled and referenced figures and tables. Particular pages may be labeled with standard `\label` commands in the text and referenced via `\pageref` .

You might also like the links from `\cite` commands to the corresponding bibliographic entry. Go look at this imaginary book by Stephen Colbert [2]. If you’re not a bibtex expert, look in `mybib.bib` at the `@ARTICLE` that generated this entry. It shows an example of accents on author names and how to preserve upper-case for letters in the title. Other entries show the use of the `and` keyword between author names. You may order a particular author’s name as either “first last” or as “last, first”. The actual format of the bibliography is controlled by the `\bibliographystyle{}` command in `dissertation.tex`. Here is another reference for [3] and another for [4].

### **3.3 Table of Contents Behavior**

Now is a good time to look back at the Table of Contents. The Graduate School template does not allow the use of hyperlinks from the Table of Contents throughout the text. However, in the TOC should appear in the ‘bookmarks’ pane when using a viewer such as Adobe Acrobat. This should be populated with named and numbered sections and subsections identical to the Table of Contents.

FIGURE 3.1: Longer caption for actual body of dissertation. Figure captions should be BELOW the figure.

### 3.4 Figures and footnotes

Figures are set with very little space between the caption and the bottom of the included graphic. This is because most graphics programs pad the edges of images. If you find the spacing unsatisfactory, you may always add a bit manually. The text of the caption is single-spaced, and the word 'Figure' is set in small caps. See Fig. 3.1. Notice the use of the nonbreakable space “ ~ ” between the “Fig.” and the reference.

Figures (and tables) are examples of 'floats — objects that  $\LaTeX$  decides where to place for you. You may give  $\LaTeX$  some hints. Change the `\begin{figure}[tbp]` to a `\begin{figure}[b!]` to restrict the

FIGURE 3.2: This is a short caption for a small figure.

placement. Inside the [ ], you can put the following

- t Allow placement at the top of the page
- b Allow placement at the bottom of the page
- h Allow placement 'here', in the middle of the page close to the text that the figure environment appears next to.
- p Allow placement on a separate 'floats page' that has no body text.
- ! Tighten the screws on the placement algorithm. This doesn't force things to happen as you say, but it makes it much more likely. Be careful: the bang option can cause figures to appear above the chapter title and in other bad locations.

Notice that each entry just changes what is *allowed*, but no preference among the entries can be registered. The default is [tbp], which is a very good default for a document like this, since floats in the middle of a page trap too much whitespace for double-spaced text. There is also a prohibition against having a page with more than 75% float. Instead, long floats will get kicked over onto float pages. Float pages are often a bad idea, as the creation of one will

often cause a domino effect, with all subsequent figures appearing on float pages themselves, and all these float pages appearing together at the end of the chapter. (This is more like sinking than floating.) Avoid this by physically moving where the figure environment appears in your source file to an earlier location. Don't be afraid to put the environment before the first spot you reference it! Many float problems can be solved by a combination of relocating the figure environment and a little fiddling with the [ ] options.

Also notice the order of the graphic, caption, and label. If you deviate from this, strange things can happen. The caption of this figure shows the use of short captions (inside []). These caption appear in the List of Tables, while the captions appear in the body. If you omit the [ ] short caption, the long caption will be used in its place.

Another technical note: since this style sheet is designed for processing by pdf<sub>l</sub>atex, `\includegraphics` looks for PDFs, PNGs, and JPGs instead of the usual PS, EPS, and TIFF formats. You can convert existing graphics with a vareity of tools. PDF graphics are preferred, as they scale nicely. The open-source software Inkscape runs on Mac OSX, Windows, Linux, and some UNIX variants. Versions 0.46 and beyond have great support for creating and editing PDFs. It can even be used to convert other docs.

### **3.4.1 List of Figures**

If you've put even one measly figure in your document, grad school rules say you need a List of Figures. It's automatically generated for you if you do

Table 3.1: Long table caption appears on in the body text. See the short caption in the List of Tables. Table captions need to be ABOVE the table.

| Numbers | Letters | Symbols |
|---------|---------|---------|

a `\listoffigures` in the master file (heck, it's there right now). Go look at the list of figures now. You should be able to click on the figure number to warp to the figure. You'll also see the result of the 'short caption' used above.

### 3.5 Table example

Just to make sure tables are formatted correctly, here's an example of a table float, see Table 3.1. You should note that `[b]` formatting (`\begin{center}[b]`) can cause floats to appear under the footnotes. Try changing it here and see the ugliness. Tables are identical to figures, except that the word 'Table' appears in the caption and its entry is in the List of Tables instead of the List of Figures.

#### 3.5.1 Bigger Tables

You may find that having an extra-wide table is necessary, like Table 3.2. You may insert a landscape page using the `\begin{landscape} . . . \end{landscape}` syntax. This will place items on the page in landscape orientation, but will not rotate the page in the PDF. Use `\usepackage{lscape}` to keep pages in por-

trait layout, with text rotated to landscape. I use `\usepackage{pdfscape}` to rotate these pages within the PDF. When using a landscape environment, do not use the `\textwidth` macro, rather you must use `\linewidth`.

Table 3.2: Some random things about random animals. These animals are random, and so is the other information in this table. Does anyone care? Not really, no.

### 3.5.2 Footnotes

Footnotes are allowed.<sup>1</sup> They are numbered with arabic numerals inside each chapter and appear at the bottom of the page.<sup>2</sup> The little footnote numbers are also hyperlinks. Try clicking them. You should place the footnote command immediately following the period of the sentence it is attached to. Any spaces or newlines will result in strange spacing between the number and the sentence.

### **3.6 Corner cases in formatting, such as very very very long section titles. Man, this goes on forever.**

Common corner-cases involve very long titles (like above). In these cases, the long titles are set single-spaced both here and in the Table of Contents.

#### **3.6.1 Figure and Table caption cases are neat, and this is an absurdly long subsection heading**

Consider the shield logo again with an absurd caption, as in Fig. 3.3. Also examine the new table, Table 3.3. Both of these have been forced onto a floats page so you can see what that looks like.

---

<sup>1</sup> But, you should probably just work them into the text since it's annoying to jump around when reading.

<sup>2</sup> ...rather than the end of the chapter or the thesis. Those would properly be endnotes, I guess.

# Biography

This page is optional. If you do plan to use it, keep in mind that it should have a page number and it should be listed in the Table of Contents. The bio should appear on the very last page of your dissertation.

A brief biography, ordinarily no more than one page in length, unless listing publications or academic honors. Be sure to not include sensitive information like your date or place of birth.

Although, your biography should not resemble a CV, it could include the following in an essay format (1) the colleges and universities that you attended with the degrees received and their dates, (2) a list of scholarships, fellowships, memberships in honorary societies, and academic honors you have received since obtaining the bachelor's degree. You can also list the titles of all books and articles you have published. If you choose to list publications, be sure the format is similar to the bibliography/references section. Each entry should be single spaced, with a double space between each entry.
